Birla Institute of Technology & Science, Pilani

Pilani Campus

Dr. Vinay Chamola, Fellow, IET (Ph.D., National University of Singapore),

Associate Professor, Department of Electrical & Electronics Engineering

To Whomsoever It May Concern

I am pleased to write this letter in strong recommendation of **Mr. Saikrishna Bulusu**, a third-year undergraduate student studying Electronics and Communication Engineering at **BITS Pilani, Pilani Campus**, whom I have known in multiple academic and project-based capacities.

I have directly interacted with Saikrishna during his coursework and through several technical and co-curricular initiatives. He was enrolled in my **Internet of Things (IoT)** course, where he consistently demonstrated strong conceptual clarity, hands-on competence, and a genuine interest in applying theory to real-world engineering systems.

In addition to coursework, Saikrishna worked closely with me in assisting the preparation of academic material for an upcoming course titled **"Computation and Communication of Drones"** at BITS Pilani. His contributions included technical structuring of lecture slides, content refinement related to drone architectures, communication pipelines, and autonomy concepts, and validating the technical coherence of material intended for advanced undergraduate and postgraduate audiences. His ability to understand emerging research-oriented material and translate it into structured academic content was particularly commendable.

Saikrishna also worked under my guidance during **ROBOFEST 4.0**, where his team won 3rd position securing 7.5 Lakh rupees in the drone swarm category. He played a significant role in system integration, UAV coordination logic, and practical execution, demonstrating strong teamwork, problem-solving ability, and resilience under competition constraints.

From a hands-on engineering perspective, Saikrishna has independently **designed, built, and tested multiple UAV platforms**, including quadcopters and an octocopter, as part of work carried out in the IoT laboratory. His comfort with hardware-software co-design and iterative testing reflects a level of maturity uncommon at the undergraduate stage.

Overall, Saikrishna is a motivated, technically strong, and research-inclined student with a clear interest in drone systems, autonomous platforms, and intelligent communication frameworks. He possesses the discipline required for sustained research work and the curiosity needed to explore open-ended problems. I am confident that he would be a valuable addition to any research group working in the domain of UAVs, robotics, or intelligent systems.

I recommend him for thesis-based research opportunities and am confident that he will meet, if not exceed, expectations placed upon him.Please feel free to contact me should you require any additional information.

Vinay Chamola

Thanks and Regards,
Dr. Vinay Chamola, SMIEEE, **Fellow, IET** (PhD, National University of Singapore)
Coordinator & Lead, Internet of Things Lab and ***Associate Professor***
Area Editor*, Ad Hoc Networks, Elsevier and IEEE Internet of Things Magazine*
Associate Editor*, IEEE Transactions on Intelligent Transportation Systems*
Associate Editor*, IEEE Networking Letters, IEEE Consumer Electronics Magazine & IET Networks*
